## CERTIFICATE OF STERILIZATION OSHA (Federal & State) Standards 29CFR Section 1910.1030

The OSHA requirement that requires **All Used Instruments to be sterilized** prior to shipping is 29CFR Section 1910.1030

OSHA Blood borne Pathogens Standard requires the use of appropriate sterilization on Potentially Contaminated Equipment and Instrumentation prior to transporting. This is necessary to ensure that the equipment is in a condition that makes it safe to be handled by all personnel who may have contact with it during transit and subsequent handling. All **Used Surgical Equipment /Instruments** are assumed to have Potential Exposure to blood or other potentially infectious bio debris/materials.

Prior to shipping, please indicate the condition of the instrument(s):

- Instruments are being returned in original packaging and are in unused condition.
- The Sterilization of the instruments being returned have been performed according to OSHA approved protocols.

Name: \_\_\_\_\_, Signature: \_\_\_\_\_

Date: \_\_\_\_\_

**Please Note.** Returns will not be accepted if they are contaminated, have blood borne pathogens, bio burden or any other type of debris. All items should be properly secured and should be in individual plastic bags. All returns must be sent back in their previously labelled packaging.
